

DSV2-100-2NCP

Normally-Closed, Two-Way, Two-Position,
Pilot-Operated Solenoid Valve

SERIES 10

DESCRIPTION

A cartridge valve designed with positive shut off to be used in load holding applications.

OPERATION

When de-energized, the DSV2-100-2NCP acts as a check valve, allowing flow from ① to ②, while blocking flow from ② to ①. When energized, the poppet lifts to open the ② to ① flow path.

Operation of Manual Override Option: To override, push button in, twist counterclockwise and release. In this position, valve will remain open in a detented condition. To return to normal operation, push button in, twist clockwise and release. Override will be detented in this position.
